J. Biochem. 247:535-544(1997).

-- FUNCTION: Binds tightly to placental ribonuclease inhibitor and has very low ribonuclease activity. Has potent angiogenic activity. Angiogenin induces vascularization of normal and malignant tissues. Abolishes protein synthesis by specifically hydrolyzing cellular tRNAs.
-- TISSUE SPECIFICITY: Serum and milk.
-- SIMILARITY: Belongs to the pancreatic ribonuclease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                            -:- FUNCTION: Angiogenin induces vascularization of normal and malignant tissues. Abolishes protein synthesis by specifically hydrolyzing cellular tRNAs (By similarity)
-:- SIMILARITY: Belongs to the pancreatic ribonuclease family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ribonuclease.";
Biochem G. 1.57:317-323(1976).
Biochem G. 1.57:317-323(1976).
-!- CATALYTIC ACTIVITY: Endonucleolytic cleavage to nucleoside 3'-
phosphates and 3'-phosphooligonucleotides ending in C-P or U-P
with 2', 3'-cyolic phosphate intermediates.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Pancreas.
-!- SIMILARITY: Belongs to the pancreatic ribonuclease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Emmens M., Welling G.W., Beintema J.J.;

    CATALYTIC ACTIVITY: Endonucleolytic cleavage to nucleoside 3'-phosphates and 3'-phosphate intermediates.
    with 2', 3'-cyclic phosphate intermediates.
    SUBCELLULAR LOCATION: Secreted.
    SIMILARITY: Belongs to the pancreatic ribonuclease family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TISSUE=Embryo;

                                                                   molecular weight ribosomal RNA.
-!- DEVELOPMENTAL STAGE: Early embryos (up to four blastomere stage).
-!- SIMILARITY: Belongs to the pancreatic ribonuclease family.
ainst several tumor cell lines in vitro, as well as antitumor vivo. It exhibits a ribonuclease-like activity against high
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-NOV-1997 (Rel. 35, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  83
residues with a 3'flanking guanine. Hydrolyzes poly(U) and poly(C) as substrates, and prefers the former. The S-lectins in frog eggs may be involved in the fertilization and development of the frog embryo. This lectin aggliniates various animal cells, including normal lymphocytes, erythrocytes, and fibroblasts of animal and human origin. It is cytotoxic against several tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3 NWATFQOKHINTPII-CNTIMDNNIYIVGGQCKRVNTFIISSATTVKAICTGVINMNVL
